

Kawasaki KLE500 Handguard Fitment Information

We recommend the use of either VPS "BHG1" or Storm "S4" with mounting kit "BSCSTD".

The Kawasaki KLE500 will require some small modifications to the original handlebars to allow fitment of Barkbusters Handguards.

- 1) Remove the original bar ends. Once removed you will see a fixed internal plug which is welded in place and has a 5mm internal thread.
 - 2) The 5mm thread must be drilled out with a 6.8mm drill.
 - 3) You must then tap out the hole using an 8mm x 1.25 tap set.
 - 4) Once this is done the 8mm bolt supplied with the Barkbusters mounting kit can be used to mount directly into the threaded hole.
- Note: The collet and nut in the mounting kit will not be required.
